

Introduction to Machine Learning

A beginner's guide to AI concepts

Presenter: Dr. Jane Smith

Date: January 2024

What is Machine Learning?

- A subset of artificial intelligence (AI)
- Algorithms that learn from data
- Makes predictions or decisions
- Improves performance with experience
- Used in recommendation systems, image recognition, etc.

Types of Machine Learning

1. Supervised Learning

- Uses labeled training data
- Examples: Classification, Regression

2. Unsupervised Learning

- Finds patterns in unlabeled data
- Examples: Clustering, Dimensionality reduction

3. Reinforcement Learning

- Learns through interaction with environment
- Examples: Game playing, Robotics
